

SECTION I: TOOL STRING

Type 'RC' Rope Socket Assembly: 1 1/2"

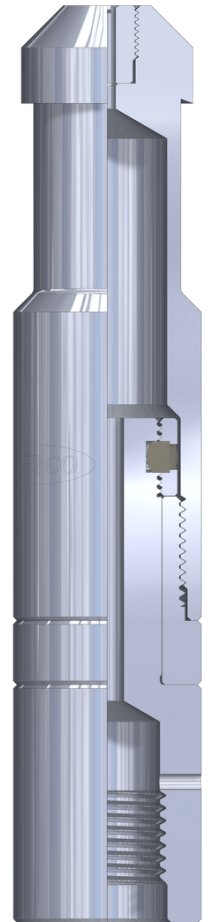

Rebco Type 'RC' Rope Socket is designed to connect a Capsulated Line to the Tool String. The wear bushing and swivel design, prevent damage to the wire.

The Capsulated Line is inserted through the wear bushing, and the Body. The clamp is tightened to the line and pulled into the Rope Socket.

A connector sub is slipped over the bottom sub, a retainer is screwed and secured by a set screw.

The bottom sub and the connector sub are made up to the Body.

Alloy Material is used to manufacture **Rebco** ROPE SOCKETS.
Materials suitable for specific well conditions are available.
Must be ordered by Wire Size in use.
